Optional

Launch script [Info](#)

You can add a shell script that will run in your instance the first time it launches.

☐ Enable Automatic Snapshots

Choose your instance plan [Info](#)

Instance plans include the instance's network type and a size which determines what bundled compute resources the instance will have.

Select a plan type [Info](#)

☒  **General purpose**
 Best for most workloads. Ideal for web servers, development environments, and small to medium databases.

☐  **Memory-optimized**
 Best for memory-intensive applications. Ideal for in-memory databases, real-time analytics, and applications with high memory demands.

☐  **Compute-optimized**
 Best for compute-intensive applications. Ideal for batch processing, high-performance computing, and CPU-bound workloads.

Select a network type [Info](#)

- ☒ **Dual-stack** Recommended
 For workloads that require full network compatibility. Includes a public IPv4 and a public IPv6 address.
- ☐ **IPv6-only**
 For workloads that do not require a public IPv4 address. Includes a public IPv6 address.
